Properties of Solution. Different properties of solutions are as follows: It is a homogeneous mixture. Its particles are too tiny and have a diameter less than 1 nm. The particles are not visible to naked eyes. Particles don't scatter a beam of light passing through it and hence the path of the light is not visible.

A colloid can be distinguished from a true solution by its ability to scatter a beam of light, known as the Tyndall effect. 13.E: Properties of Solutions (Exercises) These are homework exercises to accompany the Textmap

Some properties are the same for all solute particles regardless of what kind. These are known as the colligative properties. These properties apply to ideal solutions, so in reality, the properties may not be exactly as calculated. In an ideal solution, there are
