Linear equations are equations of the first order. These equations are defined for lines in the coordinate system. An equation for a straight line is called a linear equation. The general representation of the straight-line equation is y=mx+b, where m is the

slope of the line and b is the y-intercept.. Linear equations are those equations that are of the first order.

Note concerning #7 just above: Some older sources might include ammonium hydroxide (NH 4 OH) as a soluble hydroxide. This substance does not exist; it cannot be isolated as a pure substance. When ammonia gas (NH 3) is bubbled through water, it dissolves and a small number of ammonia molecules react with the water to produce NH 4 + and OH¯ ions. However, most of the NH

3 molecules remain as NH 3.
