### The Corals Of The Mediterranean

The corals of the Mediterranean A coral is a polyp which can live alone or in colonies and cover itself with a hard or soft exoskeleton, but its overall constitution is rather simple. The polyps are sac-like with radial symme-try and two layers of tissue: an external one called the ectoderm or epidermis, and an in-

### The corals of the Mediterranean - Oceana

The corals of the Mediterranean Corals are simple animals and as such, are capable of forming very complex and diverse communities. Contrary to popular belief, simple organisms show the highest capacity for adaptation and mutation, since complex organisms are more specialized and therefore less likely to undergo genetic and physical modifications over a short period of time.
