Why buildings fall down : how structures fail ...

Buildings constructed on either soft soil or on steeply sloped sites in a seismic zone, therefore, are at special risk. When an earthquake hits, it's as if they are being shaken back and forth in a pool of Jell-O. When the shaking finally stops, these buildings are sometimes found slumping into the soil.

Five reasons buildings fail in an earthquake—and how to ...

Buildings have fallen throughout history whether made of wood, steel, reinforced concrete, or stone. But these failures do respect the laws of physics. All are the result of static load or dynamic forces, earthquakes, temperature changes, uneven settlements of the soil, or other unforeseen forces.
